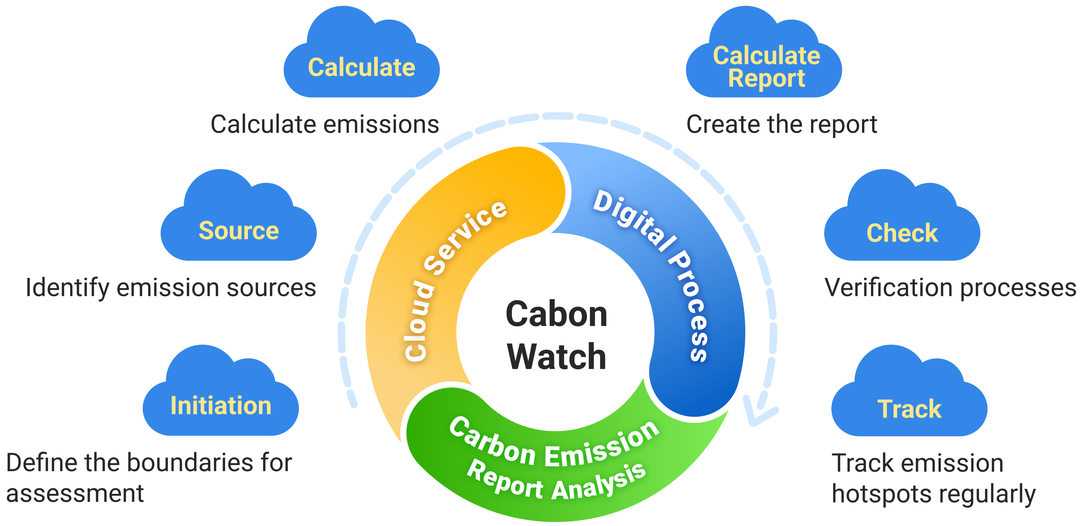
Carbon Watch

One-Stop Carbon Management Solution

Empowering businesses to accelerate carbon reduction efficiency

CarbonWatch is an all-in-one carbon management solution that integrates cloud-based management to help businesses meet regulations (ISO 14064-1 & ISO 14067). It offers tools for greenhouse gas inventories, carbon footprint calculations, emissions tracking, and internal carbon pricing, supporting carbon reduction and sustainability goals.



A Certified Carbon Management Platform Officially Recognized
By International Verification Bodies (BSI, SGS)

The Benefits for Your Business

Reduce Operation Time
Around 50% operation time has been reduced after implemented digital service.

Enhance Work Efficiency
Assign tasks, responsibilities, and track progress through the platform.

Rapid Data Search
Accelerate data updating and save time on data search.

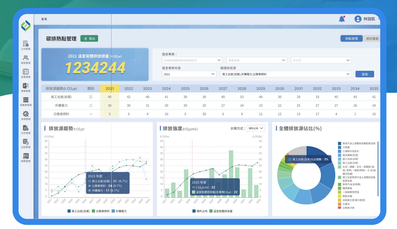
Lower Maintenance Cost
Businesses can independently complete inventory through platform and get it verified by a third party.

CarbonWatch One-Stop Enterprise Carbon Management Service

We offer cloud-based and on-premise platform services with user-friendly interfaces and cost advantages. The platform helps businesses meet regulations, conduct voluntary carbon assessments, and provides tailored solutions for carbon reduction, supporting sustainability goals.

CFVWatch Carbon Footprint Calculation Platform

Service Highlights :
- Default audit for five products with a guided process
- Unlimited number of user accounts
- Carbon hotspot analysis



GHGWatch Greenhouse Gas Inventory Program

Service Highlights :
- Default three locations
- Unlimited number of user accounts
- Built-in multiple coefficient databases

CFVWatch Carbon Footprint Calculation Platform

In line with ISO 14067, we calculate greenhouse gas emissions across all product life cycle stages, from sourcing to treatment. By disclosing emissions data, we identify hotspots and implement improvements, working with supply chain partners to achieve comprehensive carbon reduction goals.

Product and Service Lifecycle

GHGWatch Greenhouse Gas Inventory Platform

A cloud-based platform based on ISO 14064-1:2018 and the GHG Protocol, offering a complete solution for carbon inventory and energy management. It includes customizable tables, recommended coefficients, expert consulting, and real-time data sharing, enabling progress tracking and optimization to achieve carbon reduction goals.

Intuitive Operation | Quick Implementation | Easy to Use

Cloud Service
Collect data from various cloud systems

Daily Collection
Hotspots & ERP data visualization

Multiple Factors
Offer the full advanced EPA's emission factors database

One-Click Generation
Create a list and report of inventory with one click

Expert Consultants
Complete inventory with expert guidance

Collaborative Verification
Collaborate with third-party for verification

Meets user expectations | Intuitive operation | Fast data collection & analysis | Digitalization of corporate data | Supports diverse user roles | One-click report generation

01 Visualized Life-Cycle Carbon Emissions

Includes carbon emissions at each lifecycle stages, carbon emission trends, and hotspot analysis

02 Project-based Guidance

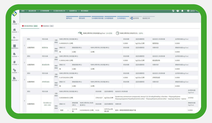
Helps users complete each process and ensure data entry accuracy

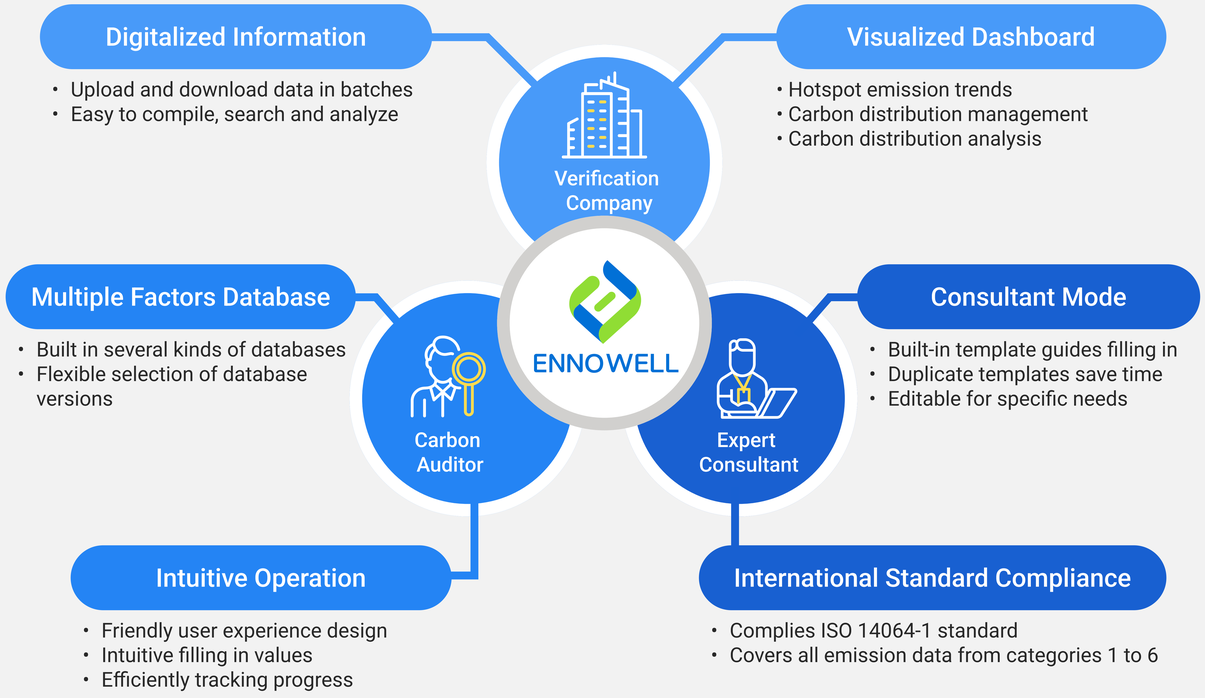
03 Process Mapping Editing Tool

Includes raw materials, manufacturing (service), distribution/retail, use, and final disposal/reuse

04 Activity Data Calculation

Quantify all carbon emission data and record completely



05 One-Click Generation Inventory Lists and Report


Built-in diverse templates allow for output style for specific needs
